LEGOLAND®

CULTIVATE YOUR CREATIVE FINGER

🪴 'These humble but prolific terracotta pots are the latest addition to our LEGO® Botanical Collection – three groups of iconic and exotic plants, miniaturised to bring classic LEGO charm to your home. From humidity-loving houseplants to desert-dwelling succulents and peculiar carnivores, this vibrant mix of plants works as a group or in smaller sets of three, keeping their colour and their fun year-round. With instructions created to make it easy for you to invite friends or loved ones to join, we hope you'll enjoy your conservatory together!'

THEO BONNER
LEGO® Model Designer

TROPICAL PLANTS

▣ Tropical rainforests cover only around 6% of the Earth's surface, yet they are home to nearly two-thirds of all plant species, including plants with medicinal properties used in the treatment of a variety of illnesses. The warm, humid conditions allow thousands of vibrant, lush flowers, trees and bushes to thrive and serve as shelter and nourishment for animals and humans alike.

(Oxalis triangularis)

FALSE SHAMROCK

A perennial plant native to Argentina, Bolivia, Brazil, Paraguay and Peru.

(Crassula ovata)

JADE PLANT

A large succulent native to South Africa and Mozambique.

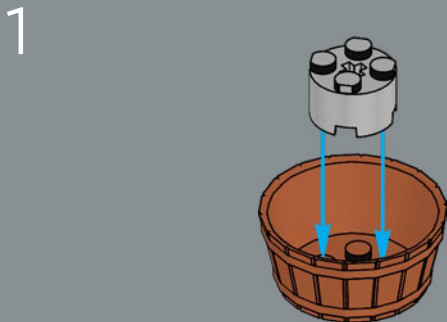

(Anthurium andraeanum)

LACELEAF

A flowering plant native to Columbia and Ecuador.

2

3

4

5

6

At a glance, *Oxalis triangularis* could be mistaken for a large group of butterflies, so what better way to capture this plant's iconic look than by using the LEGO® butterfly in a brand-new colour.

1

2

3

4

5

6

Have you ever considered learning the art of growing bonsai trees?
Jade plants grow quickly, are very accommodating and can easily
be trimmed to your liking.

7

8

9

10

11

12

13

Extra! Extra! Read all about it! Flat cap in a new colour! To replicate the thick leaves of the jade plant, we used eight LEGO® flat caps first seen in the Newspaper Kid Collectible LEGO Minifigure.

1

7

8

9

10

11

12

13

14

15

16

Laceleaves are susceptible to pests like aphids and spider mites, so having a hungry ladybug in the pot is a good way to keep your plant healthy.

17

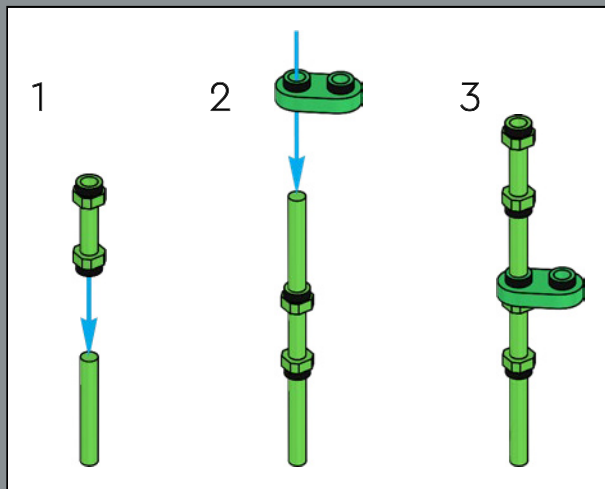

18

19

You may also know laceleaf (or Anthurium) by one of its many other names, for example, flamingo flower or painter's palette. We love the abundance of alliteration here!

CARNIVOROUS PLANTS

☐ These plants have developed the most cunning ways to lure in and trap their prey. With snares, pitfalls, adhesives, snap traps and other curious contraptions, these captivating creations almost seem like hybrids between flora and fauna. Over 600 different known species can gobble up a veritable buffet of gullible animals, from insects and larvae to crustaceans and even smaller mammals!

VENUS FLYTRAP

Native to North Carolina and South Carolina in the United States.

RED SUNDEW

Native to the south-eastern United States.

**YELLOW
PITCHER PLANT**

Native to the south-eastern United States.

1

2

3

4

5

The Venus flytrap has sensor hairs around its two leaves that trigger its trap; when an insect touches the hairs, it will cause the jaws to close and capture the prey inside.

6

7

8

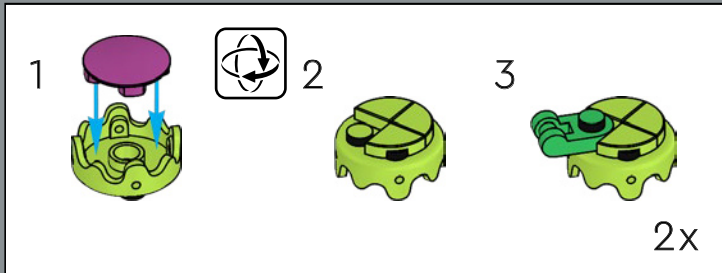

2x

9

10

Does this piece used for the jaws of the flytrap remind you of anything? The element was originally designed as icing for a cake. This is the first time it has been used in lime green.

1

2

3

4

5

6

7

8

This carnivorous plant uses thousands of tiny hairs, each tipped with a bead of sticky liquid, to trap its prey. Once the insect is stuck to the leaves, they will curl inwards around the unsuspecting little bug.

10

11

12

13

14

15

16

17

18

4x

19

Nothing is more refreshing than a pitcher of digestive enzymes!
The cups of these plants are filled with digestive juices to break
down the unfortunate insects that fall in.

To prevent accidental activations, two sensor hairs need to be
triggered before the trap closes.

20

Interesting elements alert: These pitcher plants use an explorer helmet in bright spring green for the opening of the pitcher, and a lime green broom head for the stalk.

21

1

2

3

4

4x

Surprisingly, the leaf that grows above the pitcher cannot move and seal the pitcher. Instead, it prevents rain from entering and diluting the liquid within.

ARID PLANTS

▣ Arid or desert plants are some of the toughest species you will find. They have evolved to survive in climate zones with harsh winds, intense heat and only very sporadic precipitation. They typically store what little moisture they can attract in plump pods and save it for... well, not a rainy day, but long dry spells instead. Radiant flowers help them attract pollinators, giving them an edge over any competition in their surroundings.

(Dudleya brittonii)

BRITTON'S LIVEFOREVER

A succulent native only to Baja California, Mexico.

(Opuntia humifusa)

EASTERN PRICKLY PEAR

A cactus native to large parts of the eastern United States and north-eastern Mexico.

(Mammillaria crinita f. zeilmanniana)

PINCUSHION CACTUS

Native to Mexico, and areas in the south-western United States, the Caribbean and South America.

1

2

3

4

5

This colourful succulent was named after Nathaniel Lord Britton, an American botanist who first categorised the *Dudleya* genus.

6

To capture a nice gradient of spiky leaves, we added a new colour for the 1x1 plate with a tooth. So, if you have any LEGO® animals in your house, you could always give them lovely light lavender teeth.

7

1

2

9

10

11

12

13

14

The round printed 2x2 LEGO® tiles are in a new sandy green colour and feature a fun new spiky deco to capture the look of an Eastern prickly pear.

15

16

17

Did you know that prickly pear fruit is edible?
And so are the big green 'pads'. Just be sure to
remove the spines before eating!

34

Several species of pincushion cactus grow a lovely crown of flowers in vivid colours.

35

After being catalogued for the first time in the late 1920s, *Mammillaria crinata* f. *zeilmanniana* was largely unknown, until it was rediscovered in 1988 within a specific canyon area in Mexico.
